

Destiny 400

Your Future Is Here.

Get better, clearer, more natural hearing with the most technologically advanced digital instrument available.

It's Destiny.

Better Hearing Through Superior Science

The conversion from analog to digital hearing aids a decade ago improved overall sound quality. But several problems – such as feedback, echoes, static, and white noise – remained. Starkey Laboratories has spent years researching cutting-edge technology that would eliminate these and raise our products to the next level. The result: Destiny, a digital hearing instrument created with the power and intelligence of nanoscience that is sensitive, adaptive, and nearly as intuitive as the human ear.

With the Destiny 400, you can enjoy hearing again. Sounds are classified and processed automatically by a state-of-the-art integrated circuit using a complex series of algorithms. This is a sophisticated entry-level hearing instrument that features the very best feedback erasure and directional capabilities currently available. Fitting is fast and comfortable, switching is automatic, and focus is amazingly easy to achieve.

Finally, a comfortable, easy-to-use device that delivers the listening experience you deserve.

Standard features of the Destiny 400 include:

Active Feedback Intercept (AFI) – the most effective feedback erasure system ever developed. AFI uses an entirely new patent-pending method that actually moves nuisance signals in time, so not only does the feedback virtually disappear, there are no irritating sound artifacts left behind.

Environmental Adaptation – a state-of-the-art system – with noise suppression that automatically manages and classifies different sound environments so you can move seamlessly from one listening experience to another.

Directional Speech Detector (DSD) – standard on behind-the-ear styles and optional on ITE and ITC – with the quietest directional mode in hearing aid history. DSD continuously monitors the decibel levels in noisy environments and adjusts its reception area.

Autocoil – offering instantaneous selection of telephone listening mode, without the need for manual switching.

Starkey's nFusion Technology represents a groundbreaking advance in better hearing. The first instrument ever to use nanoscience in its design, the Destiny 400 offers features never before possible on an entry-level product: complete feedback erasure, automatic switching that recognizes incoming signals instantly, and utterly peaceful moments of calm.

The best technology is complex to the point of simplicity. That's nFusion. Find out how the powerful circuit inside our Destiny 400 can bring the world of natural hearing back to you.
